Program Description*

HEATING, VENTILATION, AIR CONDITIONING, AND REFRIGERATION TECHNOLOGY TRAINING IN 1040 HOURS!

Students who complete our program will be able to diagnose, service, install, and repair HVAC-R equipment and understand the reason for building to gain or lose heat, as well as helping mitigate the impact on energy usage. Our training also includes training on systems using direct digital controls (or “DDC”). The overall scope of this training is to prepare graduates to learn how to get the most of the equipment’s performance, which is different than how this type of training is typically done. Our training sees the building as a system and the equipment as a sub-system. Additionally, as California moves towards “net-zero” energy usage for new residential and commercial buildings, we must also bring existing buildings up to the new energy standards.
